## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Davis et al (US 4,788,889).

Davis et al disclose a composite gear wherein an external gear (120) and a rotation support surface (378) are formed on an outer peripheral surface thereof and a first internal gear (340) and a second internal gear (366) are formed on an inner peripheral surface thereof at a predetermined interval in the rotating axis direction, wherein: a chuck portion (unnumbered portion adjacent gear 340, the limitation “chuck portion is being given a broad interpretation) is formed on the inner peripheral surface between the first internal gear and the second internal gear, and an inner diameter of the chuck portion is smaller than at least one of a diameter of the tip of the first internal gear and a diameter of the tip of the second internal gear (see Fig 5A).

Re claim 2, the inner diameter of the chuck portion is smaller than the diameter of the tip of the first internal gear and larger than the diameter of the bottom of the second internal gear (see Fig 5A).
